

NIMBUS

The Investigation Platform

 **BLACKRAINBOW**

Our mission is to reduce the investigation lifecycle through intelligence, efficiency and integrity.

NIMBUS

What is NIMBUS?

NIMBUS is the first and only integrated case, evidence, and quality management system to serve the corporate investigations market. Organisations are no longer dependent on spreadsheets, unsupported open source, or siloed systems for their investigation management requirements.

NIMBUS provides complete control and visibility of the full investigation lifecycle, supported with defensible evidence tracking, task management and reporting, all underpinned by compliance to latest quality standards and procedures.

NIMBUS provides a centralised platform for all stakeholders to work in, helping investigation teams to deliver efficiencies when creating and managing all types of investigations within the organisation.

NIMBUS

What does NIMBUS do for the organisation?

- Case Efficiency From Inception to Conclusion
- Fully Customisable Management Information Dashboards
- Complete Investigation Management and Visibility
- Defensible Tracking of Evidence and Chain of Custody
- Risk Reduction and Full Accountability
- Streamlined Communication Channels
- Transform Standard Operating Procedures to Operations Workflows
- Competency Driven Activities
- Quality Assured Methods and Tools
- Significant Financial Savings

NIMBUS

How Does NIMBUS Achieve This?

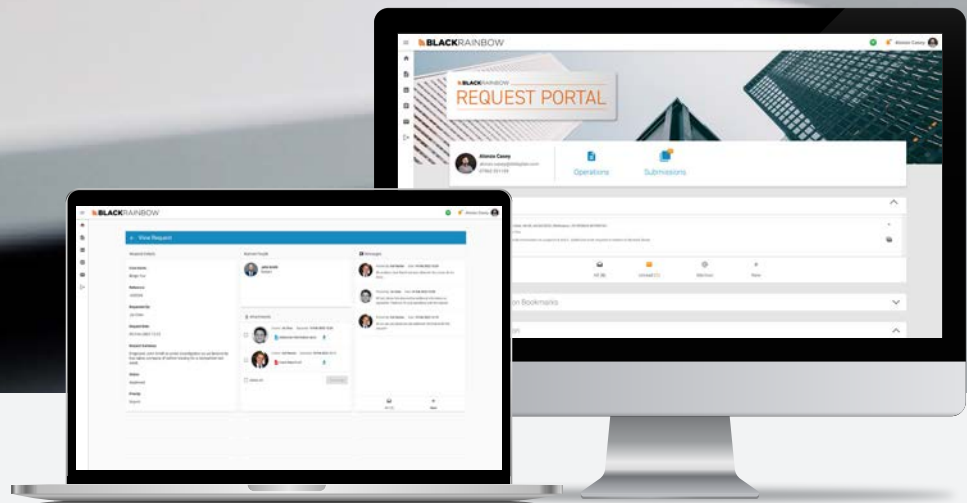

Case Management with Audit Trail

NIMBUS is flexible and configurable, to build and shape to the exact needs of the organisation. Customised dashboard views, workflow building, report construction, lookups, and permissions can be tailored to meet the variable requirements of departments and team members utilising the system.

Through comprehensive audit trails, NIMBUS fully records all actions within the system including identifying where data has been entered, exported, and any changes made to the data within the system.

“Prior to having NIMBUS, all aspects of our investigations were recorded and managed across multiple solutions such as email, spreadsheets and on employees’ devices. Having NIMBUS allows up-to-date, accurate and auditable recording of casework which has been game changing.”

Global Financial Services Customer

NIMBUS Submission Portal

The NIMBUS submission portal enables your “customers” be that external stakeholders, or internal Human Resource and Legal departments to submit an investigation request through to the forensic or investigation team for review. This request, which can contain key supporting information, documentation, and evidence can then be authorised, and assigned to the relevant investigators to conduct the required forensic or e-discovery process. Once complete, all generated reports and findings can be shared through to the original requester via the NIMBUS submission portal, negating the need for multiple communication channels and follow ups, improving overall communication efficiency with investigations.

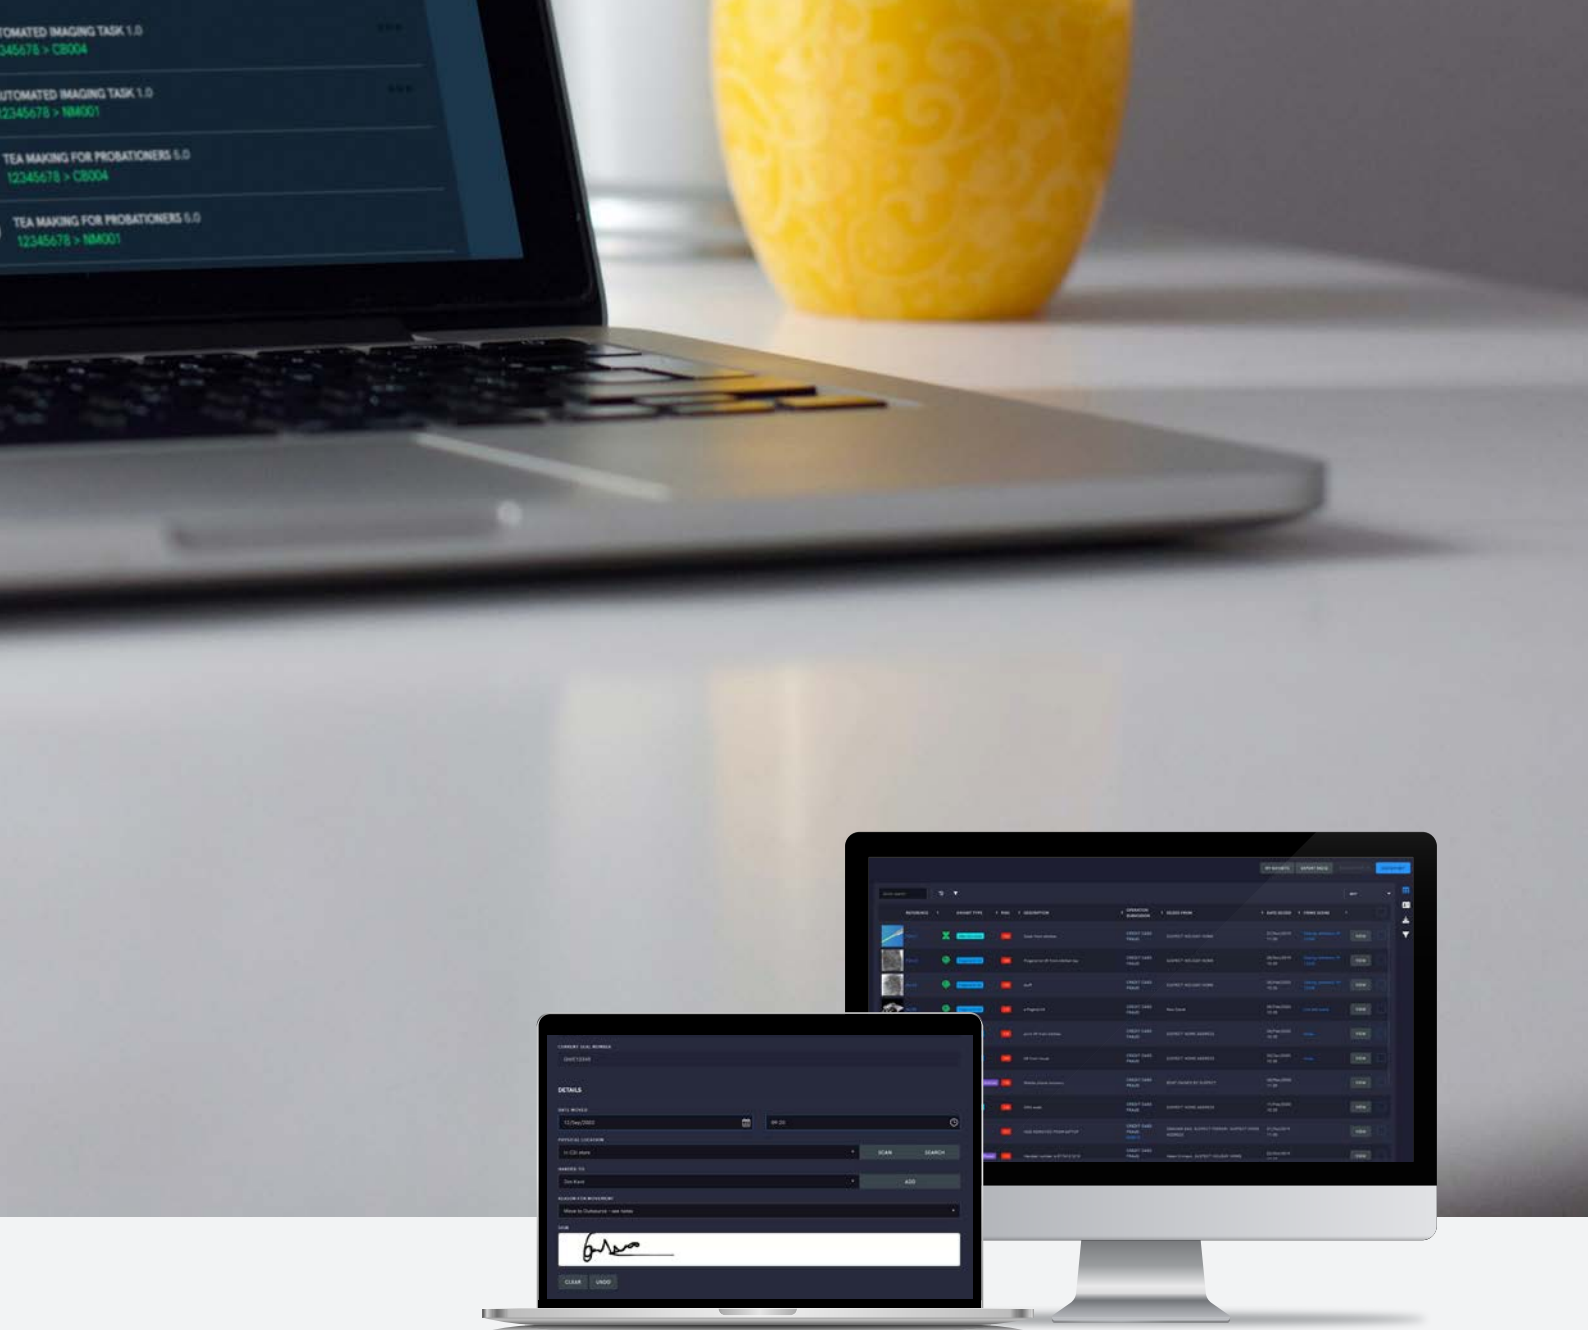

NIMBUS

How Does NIMBUS Achieve This?

Management Information

All data in NIMBUS is fully searchable, reportable, and exportable, allowing the production of management information in customised reports, charts, and graphs. NIMBUS live dashboards and reports provide you with a real-time, 360-degree view into ongoing investigations.

Evidence Tracking with Chain of Custody

NIMBUS tracks evidence, both physical and virtual from the moment they are entered into the system through to end of investigation disclosure. It tracks all details in relation to the evidence, the date and time, who it was collected from or entered by, and all subsequent movements of evidence across multiple external and internal locations, maintaining a defensible and auditable chain of custody. As well as global corporates NIMBUS is used by some of the World's leading Law Enforcement Agencies specifically for this purpose.

“We have a much improved overview on the current status of each ongoing investigation. The management of some several thousand data objects would not be possible without NIMBUS. Additionally, NIMBUS helps us standardise the required steps during an investigation to gain reproducible results and even automate certain tasks and therefore reduce our workload.”

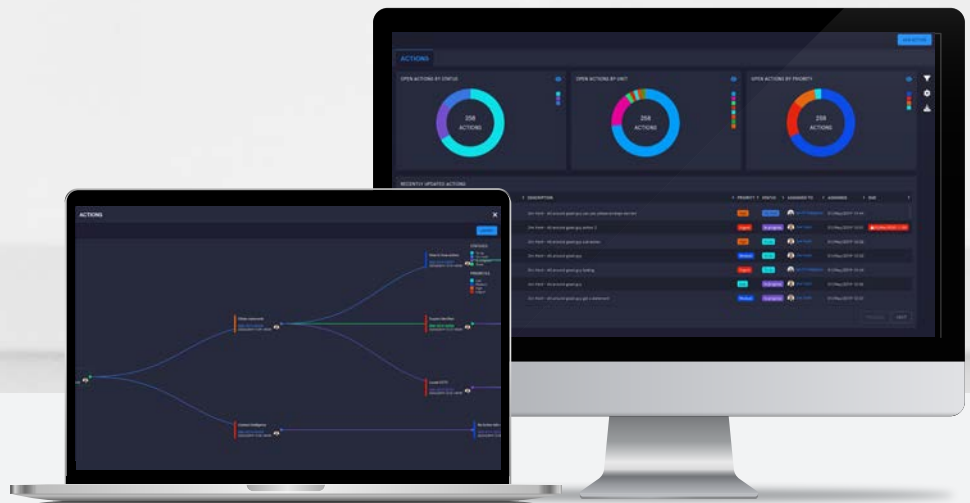

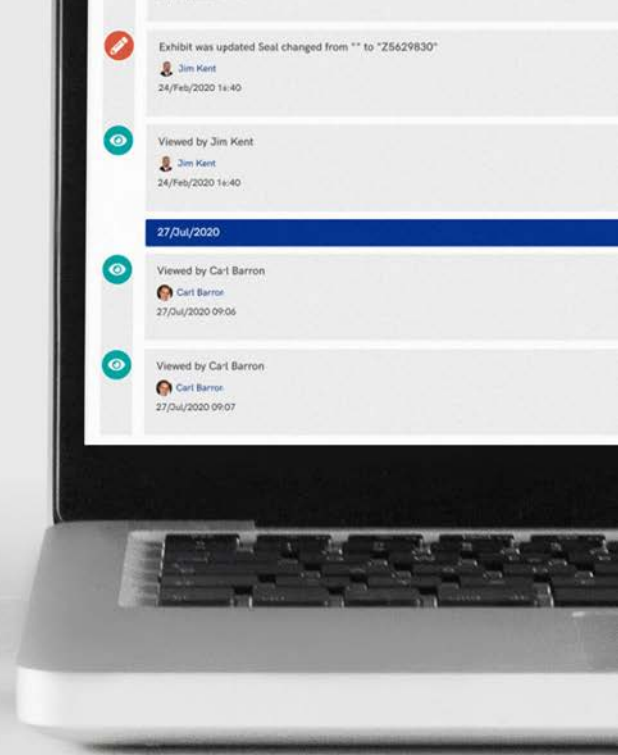

Global Financial Services Customer

“When looking at the other options during our procurement process NIMBUS was the only tool that fully met our needs and was capable of managing investigations, evidence, forensics, and ISO accreditation.”

NIMBUS

How Does NIMBUS Achieve This?

Action and Task Management

NIMBUS contains full action and tasking management including a live dashboard to see actions executed in real time as they are being worked on, and visual action trees to show action routes and decision making, along with timers and notifications. This allows tasks to be assigned, reassigned, and actioned in a transparent manner.

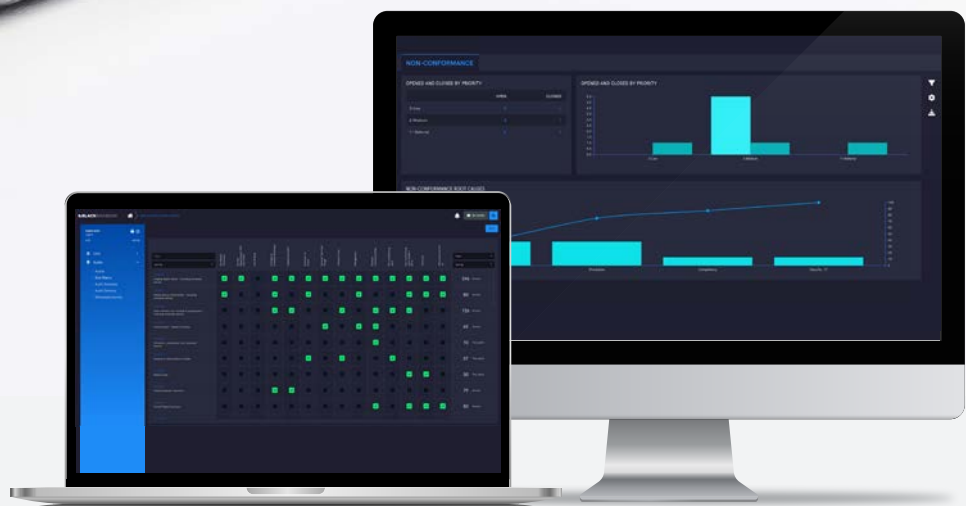

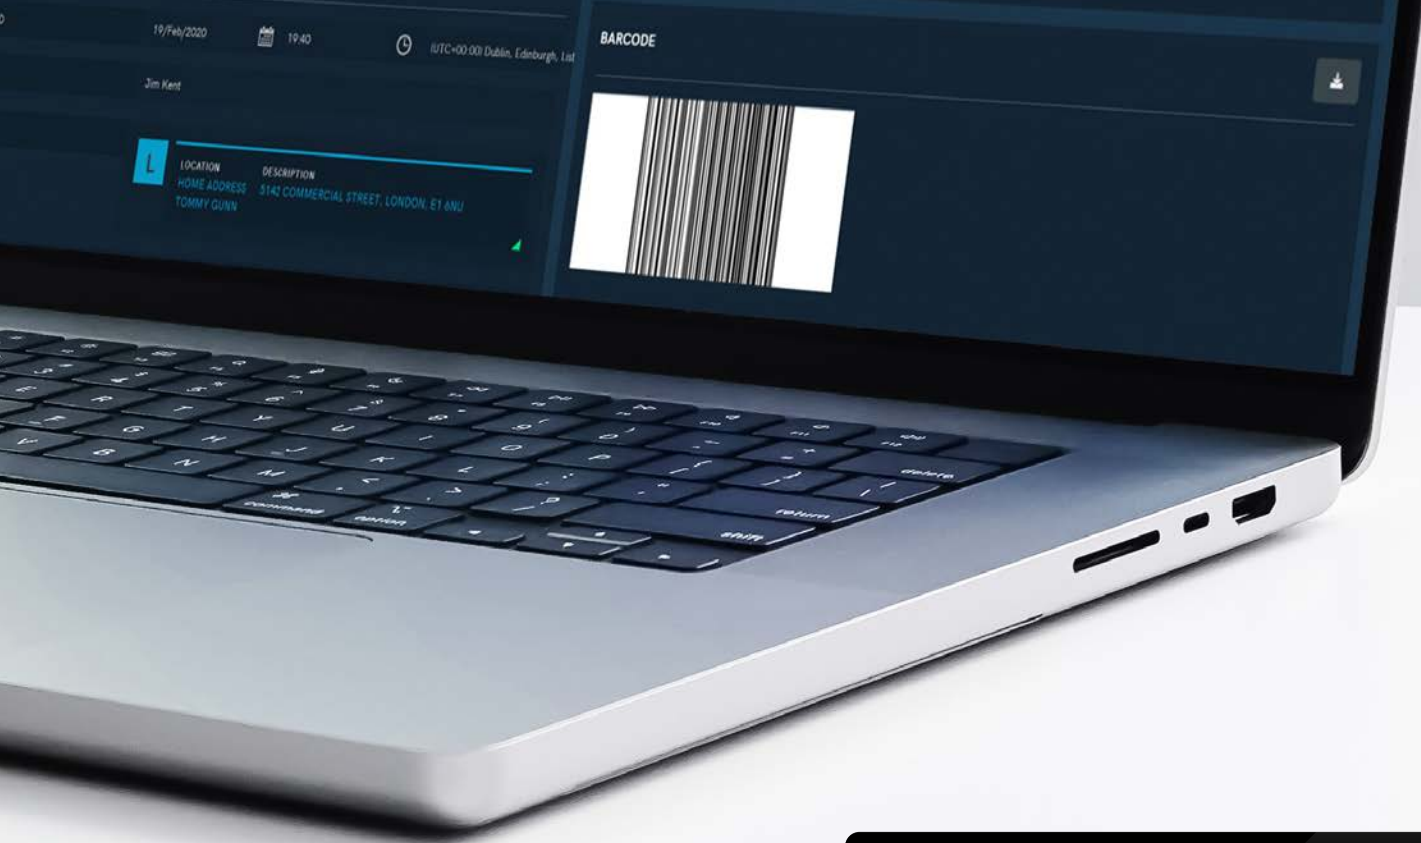

NIMBUS

How Does NIMBUS Achieve This?

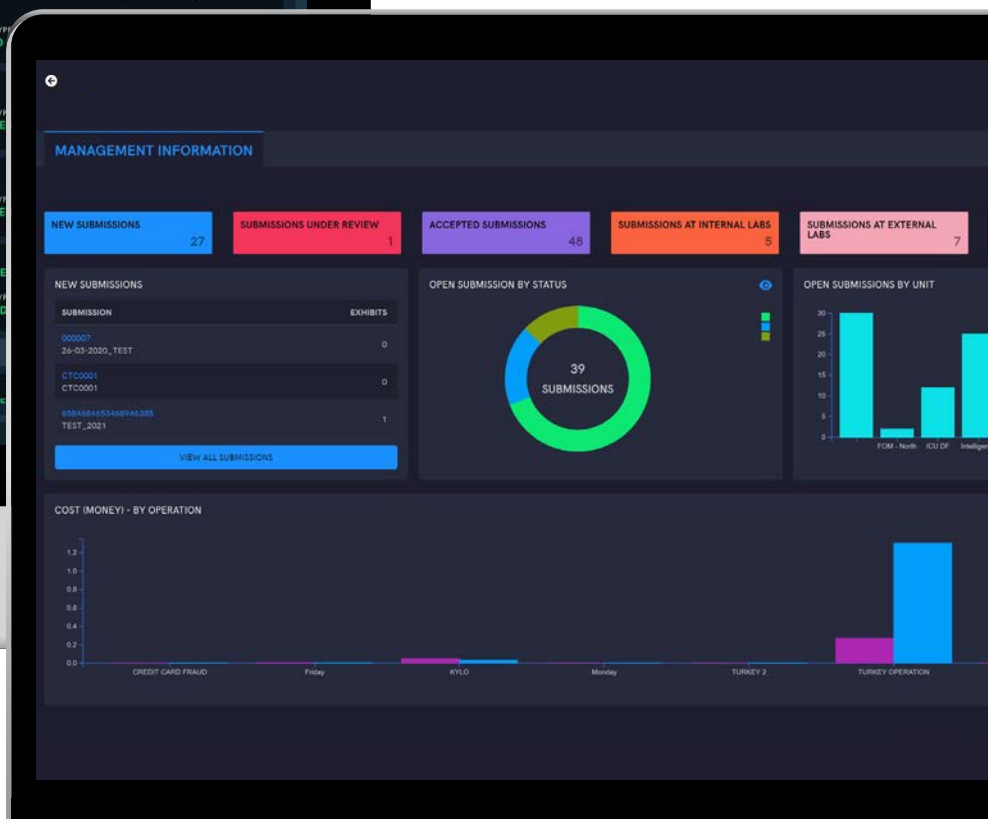

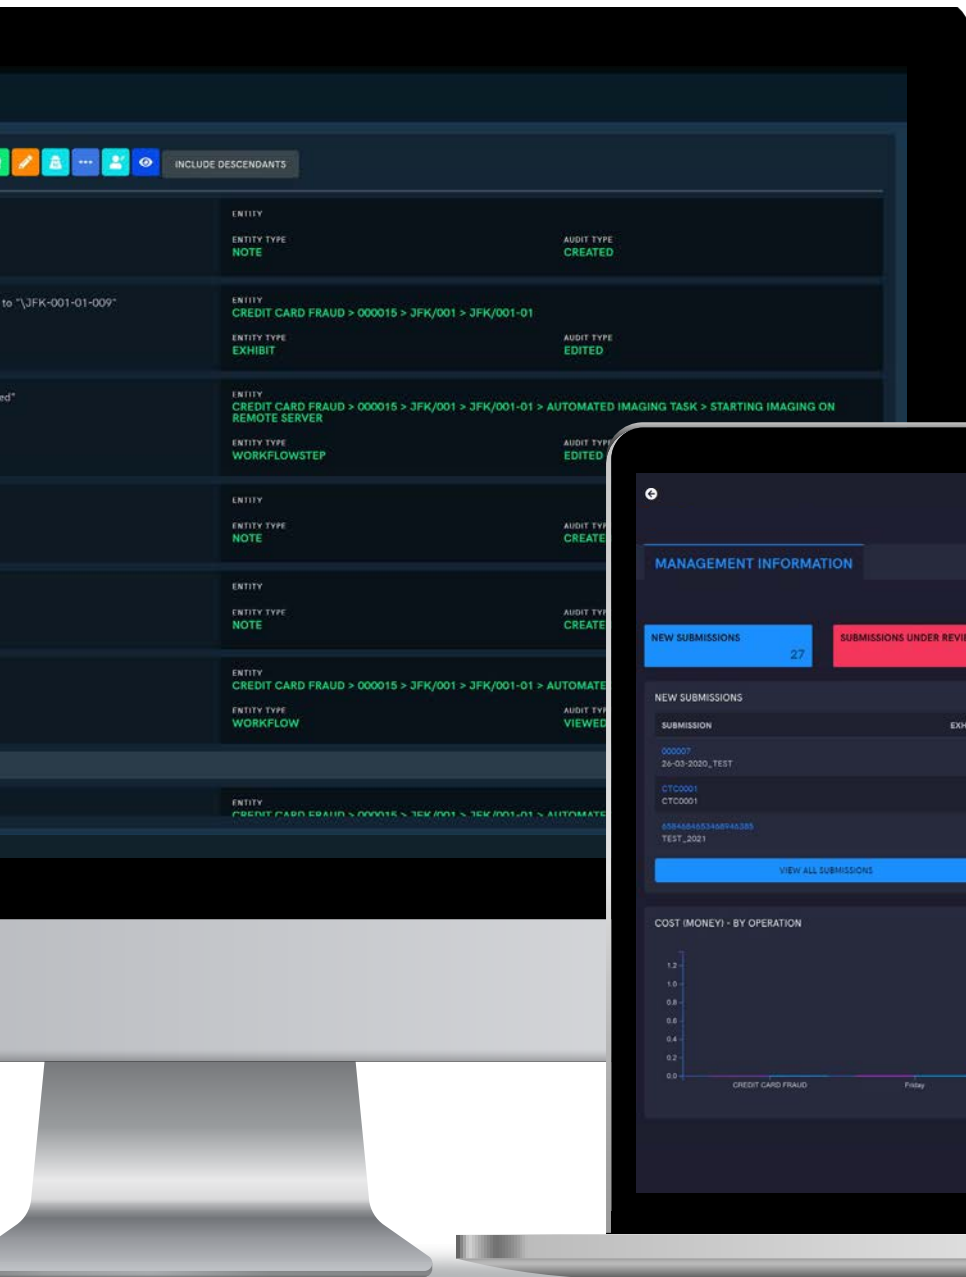

Workflow Management

NIMBUS' unique design is built on a highly flexible visual workflow engine. This enables the organisation to easily reflect key Standard Operating Procedures (SOP) within NIMBUS, therefore significantly reducing deviation from the process, and reducing business risk. It ensures that the task gets executed as part of the SOP. It can also be used to facilitate peer reviews and competency-based training activities. NIMBUS is designed for easy customisation for now and for the future, enabling NIMBUS to always be current and relevant.

Quality Management

NIMBUS is the only solution on the market providing an integrated Quality Management System ensuring all actions completed are underpinned and in line with correct and proper procedures, in accordance with international quality standards including ISO 27001 & 17025. NIMBUS delivers a reliable, robust, and defensible system through demonstrating that people are appropriately trained and competent, assets are validated or verified, and procedures are followed, all within an auditable environment to achieve repeatable outcomes.

"I would absolutely recommend NIMBUS to other organisations for the complete management of their investigations. NIMBUS achieves the best results through standardisation and alignment to our existing processes and procedures."

Corporate Fraud Investigation Customer

NIMBUS

Why NIMBUS?

NIMBUS has been adopted by organisations across a multitude of industries, all to solve the common problem of effectively managing, recording, and reporting on investigations.

Through NIMBUS scalable and adaptive framework, NIMBUS can support multi-discipline teams and their individual investigation use cases, be that HR investigations, Fraud, Theft of Intellectual Property, or Anti-Piracy. All while providing a centralised system to record and store all investigations, enabling increased visibility, continuity, and simpler generation of management information.
